Installation and Uninstallation

The installer that ran when you downloaded this plug-in from Revit Exchange has already installed the plug-in. You will need to restart Revit to activate the plug-in.

To uninstall this plug-in, exit Revit if you are currently running it, simply rerun the installer by downloading it again from Exchange, and select the 'Uninstall' button, or you can uninstall it from 'Control Panel\Programs\Programs and Features' (Windows 7) or Add/Remove Programs (Windows XP), just as you would uninstall any other application from your system.

Known Issues

The alternate export UI is currently provided only in English and French. The help is currently provided only in English.

The third party toolkit we use to write out IFC files has a limit on the maximum size of IFC file it can create. While there is no absolute metric for this, in practice it is about 1.5 GB. The toolkit provider is aware of these issues and is working on expanding and eventually removing this limit, and we will be tracking their progress on this issue.
